Fields of interest

Physiopathology of secondary cerebral damage.
Intracranial pressure monitoring and control.
Coupling of cerebral blood flow and metabolism in head trauma.
Subarachnoid Haemorrhage

Guidelines development.

Computer-based data acquisition and analysis.
Data Base design and implementation for head injury.

Clinical Trials

Propofol for sedation of head-injured patients
LAC in the recovery after coma in head injury
Propofol at different concentrations in neurosurgical anaesthesia
NAT: research on the requirements and costs of care for severely head-injured patients.
HI-Teac head injury (Tirilazad trial)
Selfotel in severe head injury
Member of the Steering Committee of the Dexanabinol Trial in TBI
Member of the Steering Committee for the trial Solvay SL 334
Member of the Steering Committee for the SynaPse trial (Progesteron in TBI)
Advisory board member for IMPACT, international co-operative research on traumatic brain injury prognosis NIH funded
Work Package leader (WP6, Physiome) for High Frequency ICU data acquisition, CENTER TBI FP7, funded by the EU Commission

Presentations at meetings

More than 210 documented with published abstracts, plus some invited 523 lectures at national and international meetings.

Publications

Author and co-author of 231 paper listed in PubMed, plus 24 book chapters.
Quotations: 5058, H-Index 38, Impact Factor 740 (Scopus search, April 2015).
